Gerrish Lyon Utility Authority  
2997 E Higgins Lake Drive  
Roscommon, MI 48653

**RE: GLUA Proposed Service District – Plans and Cost Estimates Parameters**

Gerrish Lyon Utility Authority Board Members,

Fleis & VandenBrink (F&V) recommends that the Gerrish Lyon Utility Authority (Authority) proceed with proposed sewer project as described below. The proposed service district consists of selected areas from the study area as described in the Preliminary Engineering Report (PER) dated November 2021, prepared by F&V. The sewer service district is illustrated in Exhibit A, attached to this letter.

**Estimate of project cost:**

Preliminary Opinion of Total Project Cost - \$115,000,000.00

- Estimated Cost of Gerrish Township Sewer Project: \$79,560,000
- Estimated Cost of Lyon Township Sewer Project: \$35,440,000

Cost estimate tables for Gerrish and Lyon township are included as Table 1 and Table 2, respectively.

**Service Area:**

The service area is comprised of approximately 3,984 acres, consisting of 4,996 parcels. The service area has been focused on the lands within approximately ¼ mile or under around Higgins Lake, concentrates on parcels within the watershed of the Lake, and is focused on high density and low lying areas. The service area in Gerrish Township is shown on the map attached as Exhibit B and consists of the parcels of property listed on Exhibit C. The service area in Lyon Township is shown on the map attached as Exhibit D and consists of the parcels of property listed on Exhibit E.

603 Bay Street, First Floor  
Traverse City, MI 49684  
P: 231.932.8600  
F: 231.932.8700  
www.fveng.com

### **Collection System:**

The service area will be serviced by low-pressure transmission mains consisting of approximately 371,730 feet. The preliminary collection system layout is illustrated in the attached Figures 1A and 1B. The properties connected to the system will be served by STEP tanks. The project will include approximately 3,733 STEP tanks. The tanks have been redesigned to provide additional storage capacity for periods of power outages and will be specified to be certified watertight to prevent excess infiltration from entering the system. Additional low pressure sewer main material manufacturers will be considered to reduce project costs. Additional STEP pumps and control panel manufacturers will be considered to reduce project costs and delivery delays. The project will be broken into multiple smaller construction contracts to allow for more competitive bidding, use of smaller local contractors, and an expedited construction time schedule. A low-pressure transmission sewer will be designed to the new wastewater treatment plant location. STEP pumps will be located as close to the existing structure as possible to avoid conflicts with existing water wells. Service laterals will be directional drilled to minimize disruption to existing, drives, walks, landscaping, wetlands, trees, and foliage.

### **Wastewater Treatment Plant:**

The Wastewater Treatment Plant (WWTP) is proposed to be located at the NE quadrant of US 127 and Pine Drive, refer to the attached Figure 2. The proposed parcel has been identified by MDNR and reviewed with the Authority. The site has cleared the environmental and endangered species review as well as the State Historic Preservation Office and archeological investigation. Preliminary soil borings have been collected, and conditions appear favorable for the WWTP site.

The facility will be a mechanical WWTP with a design capacity of 0.84 MGD and will consist of the following processes: fine screening, grit removal, biological treatment, clarification, rapid infiltration basins, and biosolids handling. Additionally, the plant will have septage receiving facilities to accept the solids hauled from the STEP tanks. All treatment processes will be sized to effectively treat the proposed service area.

Regards,

FLEIS & VANDENBRINK

Gary Bartow  
Project Manager
